# The Need For Database Storage

- Provides the client with greater convenience

- Allows for saving and loading data

- Reduces client input effort

Why Pickle?

- Good for storing large datasets as objects

- Reduces time and effort to build

- Used by many data scientists and AI researchers

- Built into the python language

How does it work?

- Store data in database class objects

- Objects are converted to binary serialization

- Sent to text file

- Calling method reconstructs and returns saved object
